

KEEP YOUR PROPERTY CLEAR!

Crest Fire Safe Council has finished their grant of creating a 50%shaded fuel break around the back side of Crest. It is very fulfilling to create a project of this size with so many supporters and community residents cheering us on every step of the way, and we thank everyone for your efforts. We are very proud of the agencies we have worked with, and who have monitored each step of the project, as well as the contractor, Johnny Gonzales of Environmental Land Management who did an amazing job with his men, machinery and of course, the popular goats.

As our grant is done and the job completed, we want to inform you the residents of Crest, about the importance of maintaining your defensible space. With all of the rain and now warm temperatures, the threat of fire will become real with the new growth. It is lovely now to see the green hills and yards, but remember to be prepared.

It has come to the attention of the CFSC that individuals want the goats back to do work on their private properties. We encourage and thank these residents, but want to remind all that CFSC is not a part of this nor has any liabilities related to this maintenance.

Sincerely
Crest Fire Safe Council
